January 19<sup>th</sup>, 2007

### **ESS launches redesigned CANgine Website**

It was overdue: The CANgine web site was initially published in 2003 and did not change the layout for nearly four years. Although the pages were kept actually in their contents the layout in these days looked a bit old-fashioned.

Now in early 2007 ESS published the redesigned web site with more pictures and a fresh and young layout. The moment is accurately timed: A few weeks before the world's most important exhibition in the embedded area. In mid of February the Embedded World in Nuremberg takes place (13<sup>th</sup> to 15<sup>th</sup>). As every year ESS has its own booth in Hall 12 booth 516.

The CANgine family of products is based on a small and smart hardware converter unit which converts between CAN and RS232 or Bluetooth. The product family was started in 2003 and consists now of nearly 10 different units and chips.

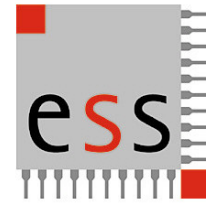

With the new layout and the revision of the site contents ESS starts a more sophisticated support especially for people interested in FMS (Fleet Management Standard) applications. Soon a FAQ list and a new domain [www.fms-connect.com](http://www.fms-connect.com) will be available for customers and interested people. "ESS is now one of the major supplier of FMS compliant devices independent from the truck and bus manufacturer." states Peter Lauer, CEO. "Nearly every day people call us or send us emails with questions about connectivity, connectors, data items and so on of the FMS standard. As we work since early 2004 on these problems and as we now have contact persons at all European truck makers, we gathered a lot of know-how on J1939 and especially FMS. In the near future we will provide this material concerning availability and connectivity on our web pages."

Peter Lauer states that that ESS now has CANgine customers in more than 20 countries all over the world. Further information is available at [www.CANgine.com](http://www.CANgine.com), which is regularly updated with the latest information.
